

THE GOOGLE MAPS FIX

SEO PRINTABLE COMPANION BUNDLE

This premium reference playbook is designed as an offline operational bundle to help local business owners systematically claim, audit, and dominate their local visibility. Use these blueprints to build local trust signals, organize automated customer outreach campaigns, and maintain high-authority directory profiles that search engines trust.

This workbook is completely self-contained and formatted for physical printing.

SECTION 1: THE 50 HIGH-AUTHORITY CITATION MATRIX

What is Domain Authority (DA)?

Domain Authority (DA) is a standard score (1-100) that predicts how much search engines trust and respect a website. A score near 100 represents massive trust (like Google or Facebook); a score near 10 represents a small, unknown site.

Why it matters: Google cross-checks your business details (Name, Address, Phone - NAP) across the web. Listing on high-DA sites creates a trust rub-off effect that establishes instant legitimacy for your profile.

How to use this list: Start at the top and claim your listing on the highest-DA directories first. Matching NAP details across all 50 platforms signals high credibility to search engines.
